*Attorney for the Rubber  
Manufacturers Association*

## QUESTIONS PRESENTED

Part D, Title I of the Clean Air Act requires new or modified major stationary "sources" of pollutants located in regions not meeting ambient air quality standards to be subjected to stringent preconstruction review and permit-issuance requirements. In 1980, the Environmental Protection Agency ("EPA") issued regulations under Part D which defined, and required the states to define, a "source" as both an entire plant and each installation or piece of process equipment within the plant. In 1981, after extensive rule-making and consideration of comments from the public and the states, EPA revised its 1980 regulations by (a) adopting a definition of "source" as the overall plant and (b) allowing the states to choose between the prior "dual" definition or the revised plantwide definition so long as Clean Air Act requirements would be met. EPA also rescinded provisions which required "reconstructed" facilities in nonattainment areas to undergo new source review as if they were new sources. In the decision below, the United States Court of Appeals for the District of Columbia Circuit vacated EPA's revised regulations. The questions presented are:

1. Whether the decision of the court of appeals is contrary to this Court's holdings in *Train v. NRDC*, 421 U.S. 60 (1975), and *Union Electric Co. v. EPA*, 427 U.S. 246 (1976), that EPA must approve a state implementation plan if it demonstrates timely attainment of air quality standards, regardless of the means chosen by the state to achieve attainment.
2. Whether, contrary to this Court's holding in *Train v. NRDC*, 421 U.S. 60 (1975), the court of appeals wrongfully substituted its policy judgment for that of the Environmental Protection Agency and the states as to (a) an appropriate definition of "source" to be used in determining whether regulatory requirements apply to industrial facilities constructed or modified in areas which do not meet ambient air quality standards and (b) whether those requirements should be applied to "reconstructed" facilities.

3. Whether a federal agency's burden to justify revision of a rule or a portion thereof should be substantially greater than the agency's burden to support its initial promulgation of the rule.

## LIST OF PARTIES BELOW

The Natural Resources Defense Council, Inc. (NRDC), Citizens For A Better Environment, Inc., and the Northwestern Ohio Lung Association, Inc. were petitioners in the proceedings below. Respondent below was Anne M. Gorsuch, Administrator, U.S. Environmental Protection Agency (EPA). The American Iron and Steel Institute and seven of its member companies,<sup>1</sup> the American Petroleum Institute and 14 of its member companies,<sup>2</sup> the Chemical Manufacturers Association, General Motors Corporation, the Rubber Manufacturers Association and a group<sup>3</sup> of 81 electric power generating

The American Iron and Steel Institute, *et al.*,<sup>5</sup> respectfully petition for a writ of certiorari to review the judgment of the United States Court of Appeals for the District of Columbia Circuit entered in the case of *Natural Resources Defense*

---

<sup>5</sup> Petitioners are the intervenor-respondents below, who are listed at pages iii-iv and nn. 1-3 *supra*, except for the group of 81 electric power generating companies and two electric utility trade associations there set forth, who do not join in this Petition, and except for Chevron U.S.A., Inc., which has filed its own petition in number 82-0005. See note 6 *infra*.

*Council, Inc., et al., v. Gorsuch, et al.*, No. 81-2208, on August 17, 1982.

### OPINIONS BELOW

The opinion of the court of appeals is reported at 685 F.2d 718 and is reprinted in the appendix to the petition in No. 82-1005 ("Chev. App.") at A-1 - A-20, which is incorporated by reference herein.<sup>6</sup> The Environmental Protection Agency's final regulation and statement of basis and purpose are published at 46 Fed. Reg. 50766 (October 14, 1981) and relevant portions are reprinted in the Appendix to this Petition at 19a-32a.

### JURISDICTION

The opinion and judgment of the court of appeals was entered on August 17, 1982. *See* Chev. App. at A-1 - A-20. Timely petitions for rehearing and suggestions for rehearing *en banc* were denied by orders of the court of appeals entered on October 27, 1982. *See* Chev. App. at B-22 - B-25. The jurisdiction of this Court is invoked pursuant to 28 U.S.C. § 1254(1).

### STATUTES AND REGULATIONS INVOLVED

This case involves sections 101, 107, 110, 111, 171, 172, 173, 302, and 307 of the Clean Air Act, as amended, 42 U.S.C. §§ 7401, 7407, 7410, 7411, 7501, 7502, 7503, 7602, and 7607. The pertinent provisions of these sections together with the regulations at issue herein are set forth in the Appendix hereto at 1a-10a, 19a-33a.

---

<sup>6</sup>The petition in No. 82-1005, *Chevron U.S.A., Inc. v. Natural Resources Defense Council, et al.* ("Chev. Pet."), is from the same judgment of the court below which is the subject of this petition. Because we believe that the Court should grant review in No. 82-1005, which presents essentially the same questions as the present petition, we shall not file a separate response in that case.

## STATEMENT OF THE CASE

This case involves the scope of EPA's—and each state's—authority to define the term “source” for purposes of determining whether a new or modified industrial plant, or portion thereof, is subject to preconstruction review under Part D of Title I of the Clean Air Act, 42 U.S.C. §§ 7401, *et seq.* EPA regulations which adopted, and allowed (but did not require) the states to adopt, a definition of “source” as an entire plant were vacated by the court below. The vacated definition allowed industrial plants to modernize and to respond quickly to changing market conditions while encouraging plant managers to develop innovative means for improving air quality.

In 1977 Congress enacted comprehensive amendments to the Clean Air Act, adding, *inter alia*, Part D of the Act which applies to “nonattainment areas”—areas identified by the states pursuant to Section 107(d) of the Act, 42 U.S.C. § 7407(d), as not meeting one or more national ambient air quality standards.<sup>7</sup> The purpose of Part D is to ensure the attainment of the ambient air standards in these nonattainment areas by specified dates. To this end, Part D requires the states, for each nonattainment area within their borders, to prepare an implementation plan (“State Plan”) containing regulatory requirements that will lead to timely attainment of those standards. Section 172(a), 42 U.S.C. § 7502(a). EPA must approve each such State Plan if it demonstrates, among other things, attainment of the ambient air standards by the statutory deadlines and, in the interim, “reasonable further progress” toward attainment of those standards.<sup>8</sup> Section 172, 42 U.S.C. § 7502.

---

<sup>7</sup> National ambient air quality standards are promulgated under Sections 108 and 109 of the Clean Air Act, 42 U.S.C. §§ 7408, 7409. Ambient air standards are in effect for six pollutants: sulfur oxides, particulate matter, carbon monoxide, nitrogen oxides, photochemical oxidants (expressed as ozone), and lead.

<sup>8</sup> The Act defines “reasonable further progress” as “annual incremental reductions in emissions of the applicable air pollutant . . . .” Section 171(1), 42 U.S.C. § 7501(1). This requirement pre-

State Plans must also provide, *inter alia*, for preconstruction review of any major new "source" or any modification of a major existing "source" that will result in a significant net increase in pollutant emissions from the "source."<sup>9</sup> *Id.* Before a new major stationary "source" may be constructed in a nonattainment area or an existing major stationary "source" may be significantly modified in such an area, the owner or operator must obtain a permit evidencing compliance with a number of stringent substantive requirements.<sup>10</sup> If a State Plan under Part D is not yet in effect, no major stationary

---

cludes the states from deferring necessary emission reductions to the end of the statutory compliance period. For example, a state which has determined that attainment of the SO<sub>2</sub> ambient standard will require a 100-ton-per-year reduction of SO<sub>2</sub> emissions might satisfy the "reasonable further progress" requirement by directing existing sources to reduce their emissions by a total of 20 tons the first year, 35 tons the second year, and 45 tons the third year.

<sup>9</sup> A "major stationary source" is one which emits, or has the potential to emit, one hundred tons per year or more of any air pollutant. Section 302(j), 42 U.S. § 7602(j). A "major" modification is one that results in a "significant net emissions increase" of any pollutant. 40 C.F.R. § 51.18(j)(1)(v) (1982). The significance levels currently in force are:

Carbon monoxide: 100 tons per year (tpy)

Nitrogen oxides: 40 tpy

Sulfur dioxide: 40 tpy

Particulate matter: 25 tpy

Ozone: 40 tpy of volatile organic compounds

Lead: 0.6 tpy

40 C.F.R. § 51.18(j)(1)(xiii) (1982).

<sup>10</sup> Preconstruction permits may be issued only if: (1) the increase in emissions from the new or modified major source will be more than offset by corresponding emission decreases in the area, or have already been accounted for by a growth allowance built into the State Plan; (2) the new or modified major source installs control technology to achieve the lowest achievable emission rate for such category of sources; (3) the new source owner certifies that the other major

"source" may be constructed or modified in a nonattainment area if the construction or modification will cause or contribute to a violation of an ambient air standard. Section 110(a)(2)(I), 42 U.S.C. § 7410(a)(2)(I). This prohibition is sometimes referred to as the "construction moratorium." *See, e.g., Chev. App. at A-8.*

The issue in this case is whether EPA may define, and permit the states to define, "source" as an entire plant for purposes of preconstruction review under Part D of the Clean Air Act. If "source" is so defined, the owner or operator of an industrial plant located in a nonattainment area can make a process or equipment change which results in an increase in pollutant emissions at one unit within the plant without becoming subject to the permit process required by Part D in Section 172(b)(6), 42 U.S.C. § 7502(b)(6), *if* he counters that increase with an equal or greater contemporaneous *decrease* in emissions elsewhere in the plant. This is because the Act provides that a "modification"<sup>11</sup> of a source occurs only when a physical change to that source results in a *net* emissions *increase* from the source as a whole.<sup>12</sup>

In regulations promulgated on August 7, 1980,<sup>13</sup> EPA had defined the term "source" for purposes of Part D as *both* an

---

sources it owns in the state are in compliance with the Act; and (4) the state is carrying out its revised Part D State Plan. Section 173(1)-(4), 42 U.S.C. § 7503(1)-(4).

<sup>11</sup> "Modification" is defined in Section 111(a)(4) of the Act, 42 U.S.C. § 7411(a)(4), as "any physical change in, or change in the method of operation of, a stationary source *which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted.*" (Emphasis added.) This definition is expressly incorporated into Part D. *See* Section 171(4), 42 U.S.C. § 7501(4).

<sup>12</sup> *See Alabama Power Co. v. Costle*, 636 F.2d 323, 401-02 (D.C. Cir. 1979).

<sup>13</sup> 45 Fed. Reg. 52676 (August 7, 1980).

industrial plant *and* the individual pieces of process equipment within the plant. EPA's stated intention in adopting this "dual" definition of "source" was to subject the maximum number of "sources" and internal modifications at major "sources" to new source review and the permit requirements of Part D. 45 Fed. Reg. 52676, 52697 (August 7, 1980). As a consequence of this definition, virtually every significant process or equipment change undertaken by a plant owner or operator, even those which resulted in a net emissions decrease from the plant as a whole, were subjected to these requirements. This "dual" definition was immediately challenged as arbitrary and illegal<sup>14</sup> because the D.C. Circuit in two prior cases had held that EPA's discretion to define the term "source" under Section 111(a)(3), 42 U.S.C. § 7411(a)(3), as applied to other parts of the Act, did not extend to defining a "source" as a "combination of sources."<sup>15</sup> EPA thereafter undertook further rulemaking, which included significant public and state participation, following which, in October 1981, EPA adopted and permitted the states to adopt a single plantwide "source" definition for purposes of all programs established by the 1977 Amendments.<sup>16</sup> 46 Fed. Reg. 50766 (October 14, 1981). By making this

---

<sup>14</sup> See *Chemical Manufacturers Association v. EPA*, No. 79-1112 and consolidated cases (D.C. Cir. 1979).

<sup>15</sup> *Alabama Power Co. v. Costle*, 636 F.2d at 395-96; *ASARCO, Inc. v. EPA*, 578 F.2d 319, 327-29 (D.C. Cir. 1978).

<sup>16</sup> In 1977, Congress added both Parts C and D to Title I of the Act. Part C, entitled "Prevention of Significant Deterioration of Air Quality," sets forth measures and requirements to be applied in areas where the ambient air quality is *better* than required by national ambient air quality standards. EPA's regulations implementing the prevention of significant deterioration program under Part C of the Act contain a plantwide "source" definition. See 40 C.F.R. § 51.24(b)(5) (1982).

EPA's October 1981 definition of "source" for Part D purposes is identical to the Part C "source" definition. See, e.g., 40 C.F.R. § 51.18(j)(1)(i) (1982). Both definitions adopted verbatim the statuto-

revision, EPA intended (1) to reduce the regulatory complexity of the prior "dual" definition, which had engendered confusion among source owners and operators, and (2) more importantly, to allow the states greater flexibility in developing their programs to achieve the required ambient air quality standards. *Id.* at 50767.

The plantwide source definition makes it possible for essential industrial growth and modernization of plants located in nonattainment areas to continue, while providing strong incentives to plant managers to improve air quality in those areas. Where the plantwide definition applies, lengthy and costly preconstruction review for modified industrial operations becomes unnecessary so long as there is no net increase in pollutant emissions from the plant as a whole.<sup>17</sup> This netting of

---

ry definition of "source" set forth in Section 111(a)(3), 42 U.S.C. § 7411(a)(3) (relating to standards of performance for new stationary sources): "any building, structure, facility, or installation which emits or may emit any air pollutant."

Exercising the discretionary power expressly recognized in *Alabama Power*, 636 F.2d at 397-398, to adopt definitions of the component terms of "source," EPA in its October 1981 regulations, as in its regulations under Part C, defined "building, structure, facility, or installation" to mean "all of the pollutant-emitting activities which belong to the same industrial grouping," *e.g.*, as a plant. *See, e.g.*, 40 C.F.R. §§ 51.18(j)(1)(ii) (1982) and 51.24(b)(6) (1982).

<sup>17</sup> For example, the plantwide definition would allow a plant owner or operator to replace an obsolete, energy-intensive boiler which emits 120 tons of particulate matter per year with a new energy-efficient boiler which emits 105 tons of particulate matter per year without first obtaining a permit. Under EPA's prior "dual definition" of "source" the new boiler would be deemed a new source for which a permit was required even though emissions from the overall plant decreased by 15 tons per year. The new boiler, however, is subject to stringent emission controls specified in new source standards of performance applicable under Section 111 of the Act. *See* 42 U.S.C. § 7411.

internal-emission increases against internal-emission decreases is sometimes referred to as the "bubble concept," since the plant is treated as if it were under a canopy or "bubble" for purposes of determining its net emissions. The bubble concept is widely recognized as one of the most efficient, cost-effective and, therefore, anti-inflationary means of controlling air pollution because it encourages plant owners and operators to apply their know-how and ingenuity to develop improved methods for controlling air pollution. The plant manager is given the flexibility to install tighter controls where costs are lowest and lesser controls where costs are highest. As a result, for any commitment of resources, more pollution control can be accomplished.<sup>18</sup>

---

<sup>18</sup> In an editorial commenting upon EPA's first adoption of an air pollution bubble policy, one aimed at giving existing plants greater flexibility in meeting clean air requirements in State Plans, the *Washington Post* stated "EPA deserves congratulations for that governmental rarity—a creative and practical new idea." *Washington Post*, Dec. 10, 1979, at A26. Similarly, the *New York Times* stated "The bubble is so sensible an idea that one wonders why it took so long to surface." *New York Times*, Dec. 6, 1979, at A30. See also *EPA and Industry Pursue Regulatory Options*, *Science*, Feb. 20, 1981, at 796-98. Another commentator cited the following example of how the "bubble" would work at an existing plant:

Until recently, E.I. du Pont de Nemours & Co. was slated to spend a staggering \$26 million to meet clean air standards at its Chambers, N.J. chemical plant. But under a new regulatory scheme developed by the Environmental Protection Agency, du Pont's compliance bill could be pared to just \$6.5 million, and still total plant emissions would be reduced a full 89%, five percentage points more than under the costlier plan.

*New Ways to Short Cut Costly Rules*, *Dun's Review*, Feb., 1980, 62, 62. (Emphasis added.) See generally National Commission on Air Quality, *To Breathe Clean Air*, 2.1-84, 4.1-36-37 (1981). The National Commission on Air Quality later stated with regard to use of the bubble concept in the Part C program:

The bubble policy offers companies a strong incentive to reduce emissions from existing facilities in order to modernize without

As a result of a challenge by NRDC, the revised regulations were vacated by the court below.<sup>19</sup> The court also denied (by a five to one vote) petitioners' suggestion for rehearing *en banc*. Chev. App. at B-25.

The decision below forces plants in nonattainment areas to engage in lengthy preconstruction review procedures for proposed new or modified plant operations, even though (1) the change results in no increase, or even a net decrease, in pollutant emissions from the plant, and (2) the area as a whole continues to make "reasonable further progress" toward attainment of national ambient air quality standards by the

---

triggering [prevention of significant deterioration] review. While there are not sufficient data to quantify the influence of the bubble policy on total emission levels, the consensus of regulators and industry is that it has led to significant reductions. . . .

*Id.* at 3.5-48 [citation omitted].

<sup>19</sup> The vacated regulations also deleted provisions in EPA's August 7, 1980 rules which required "reconstructed" facilities in nonattainment areas to undergo new source review as if they were new sources. EPA defined "reconstruction" as any rebuilding of a "source" for which the capital cost of the new components exceeds 50 percent of the capital cost of a comparable entirely new source. See 45 Fed. Reg. at 52742 (former 40 C.F.R. § 51.18 (j)(1)(ix) (1981)). This economic test imposed new source review without regard to whether emissions resulting from the reconstructed source increased, decreased or stayed the same. The court below vacated EPA's deletion of the reconstruction rule as "ancillary" to EPA's adoption of the plantwide definition of "source." Chev. App. at A-19 — A-20. Petitioners submit that the court below should have upheld EPA's decision to delete the reconstruction rule whether or not it upheld the plantwide definition. If the validity of EPA's action deleting the reconstruction rule is to be tied to the plantwide definition of "source," however, as asserted by the court below, and by EPA, 46 Fed. Reg. at 50767, validation of the plantwide "source" definition by this Court also validates EPA's decision to delete the reconstruction rule.

compliance dates specified in the statute. In areas where a State Plan has not yet been approved by EPA—whether or not for reasons related to stationary source emissions—the construction moratorium would prevent plant owners or operators from undertaking any significant modifications at a plant even where such changes *reduce* pollutant emissions from the plant. See Section 110(a)(2)(I), 42 U.S.C. § 7410(a)(2)(I).<sup>20</sup> This would preclude plant owners from replacing aging or energy-intensive equipment or from otherwise modernizing their equipment.

## REASONS FOR GRANTING THE WRIT

### I. The Decision Below Inhibits Reasonable Economic Growth In Nonattainment Areas And Thus Impedes The Nation's Ability To Recover From The Current Recession.

If this country is to experience full recovery from the current period of recession, low production, and unemployment, this Court's review of the decision below is of critical importance. Contrary to one of Congress' stated purposes in enacting the 1977 Amendments to the Clean Air Act and to the national interest in economic recovery, the decision below inhibits "reasonable economic growth,"<sup>21</sup> in heavily industrialized areas without benefiting air quality. It necessarily will tend to discourage or postpone the rebuilding of existing outmoded industrial facilities—rebuilding that would put people to work and result in more efficient production.

In proposing and in taking final action to rescind its "dual" "source" definition, EPA cited concerns expressed by and documented in state, industry, and public comments that (1)

---

<sup>20</sup> If the construction moratorium applies, equipment replacement or modernization is precluded even if the plant owner is able to comply with all of the Part D permit requirements (lowest achievable emission rate, offsets, statewide compliance, etc.) imposed by Section 173, 42 U.S.C. § 7503.

<sup>21</sup> H.R. Rep. No. 95-294, 95th Cong., 1st Sess. 211 (1977).

the "dual" definition was acting as a disincentive to new investment and modernization by discouraging modifications to existing facilities, and (2) it could actually retard progress in air pollution control by discouraging replacement of older, dirtier processes or pieces of equipment with new, cleaner ones. 46 Fed. Reg. 16280, 16281 (March 12, 1981); 46 Fed. Reg. at 50768. Moreover, because Section 110(a)(2)(I), 42 U.S.C. § 7410(a)(2)(I), bans construction or modification of major "sources" in nonattainment areas lacking a State Plan meeting the requirements of Part D (the "construction moratorium"; see pages 4-5 *supra*), the decision below brings to a halt necessary process changes and upgrading of industrial plants in such areas in states which today do not define "source" as compelled by that decision, even where those changes would result in a net *decrease* in emissions from a plant. See, e.g., Chev. Pet. at 2.

## **II. The Issues Decided Below Have National Impact But Cannot Be Raised In Another Circuit Or In Individual Enforcement Proceedings**

Although the impact of the decision below is nationwide in scope, recourse to judicial relief is severely limited. The regulations under review here were designated by EPA as "nationally applicable," 46 Fed. Reg. at 50766, and, unlike most federal agency decisions, nationally applicable EPA regulations under the Clean Air Act may be reviewed only by the Court of Appeals for the District of Columbia Circuit. Section 307(b)(1), 42 U.S.C. § 7607(b)(1). Moreover, under Section 307(b)(1) of the Clean Air Act, 42 U.S.C. § 7607(b)(1), challenges to the rules at issue in this litigation must be brought within 60 days of promulgation. Thereafter, the rules are not subject to challenge, not even as a defense in civil or criminal litigation. See Section 307(b)(2), 42 U.S.C. § 7607(b)(2).<sup>2</sup> Section 307(b) thus precludes any possibility of a

<sup>2</sup> However, on at least two occasions, members of this Court have expressed reservations regarding the constitutionality of the notice and review preclusion provisions of Section 307(b). See *Harrison v.*

conflict among the circuits and also precludes any further challenges to these rules. Only this Court can address the issues raised by these rules and only on this occasion.

**III. Contrary To Decisions Of This Court, The Court Below Unduly Intrudes Upon The Discretion Of The States To Select Their Choice Of Means For Attainment Of Air Quality Standards Within Their Borders**

Because it dictates the scope of each state's stationary source preconstruction review and permit program, the decision below unlawfully limits the discretion of the states to make internal regulatory decisions as to the best means to attain ambient air standards and thus is inconsistent with this Court's holdings in *Train v. NRDC*, 421 U.S. 60, 79-80, 86-87 (1975), and *Union Electric Co. v. EPA*, 427 U.S. 246, 266 (1976). Those decisions made clear that the Clean Air Act places "primary responsibility"<sup>23</sup> for assuring air quality on the states, not EPA or the courts, and that EPA *must* approve the mix of emission controls in a state implementation plan so long as it provides for timely attainment of national ambient air standards.<sup>24</sup>

---

PPG Industries, Inc., 446 U.S. 578, 592 n.9, 594-95 (1980) (majority opinion, dictum), (Powell, J. concurring); *Adamo Wrecking Co. v. United States*, 434 U.S. 275, 289 (1978) (Powell, J. concurring).

<sup>23</sup> See Section 107(a), 42 U.S.C. § 7407(a), *quoted in Train v. NRDC*, 421 U.S. at 64 ("Each State shall have the primary responsibility for assuring air quality within the entire geographic area comprising such State . . ."). See also Section 101(a)(3), 42 U.S.C. § 7401(a)(3) ("the prevention and control of air pollution at its source is the primary responsibility of States and local governments").

<sup>24</sup> See *Train v. NRDC*, 421 U.S. at 64, 79-80. Under Section 110(a)(3) of the Act, EPA is essentially limited to a plan-revision review function. See Section 110(a)(3), 42 U.S.C. § 7410(a)(3). Having set ambient air quality standards, EPA must approve or disapprove a plan revision within four months of submission and must

States may wish to address the problem of ultimately achieving attainment of national ambient air quality standards under Part D in ways other than requiring mandatory preconstruction review of activities which do not increase emissions. See page 14 *infra*. One such approach would be to broaden the base for emission control efforts by targeting other existing sources of emissions which, when subject to regulatory scrutiny, might yield significant emission reductions. Another approach would be to impose more stringent controls upon existing sources in order to exceed the pollutant reductions necessary to attain the ambient air standards and create thereby an emissions reserve or allowance for future growth.<sup>25</sup>

In enacting the 1977 Amendments to the Clean Air Act, Congress specifically intended to increase the states' flexibility to tailor implementation plans to their particular circumstances so long as reasonable further progress toward attainment was assured.<sup>26</sup> Congress declared that Part D has:

"two main purposes: (1) to allow reasonable economic growth to continue in [a nonattainment] area while making reasonable further progress to assure attainment of

---

approve it if it provides for timely maintenance and attainment of the standards and otherwise meets the requirements set forth in Section 110(a)(2) and, *inter alia*, Part D.

<sup>25</sup> This establishment of a pollutant emissions allowance for economic growth planning purposes is contemplated and specifically authorized in Part D at Sections 172(b)(5) and 173(1)(B), 42 U.S.C. §§ 7502(b)(5) and 7503(1)(B).

<sup>26</sup> As explained in the 1977 Senate Report:

The authority of States and localities to implement air pollution control programs within the framework of a national policy must be encouraged. The framework proposed in this bill is flexible in terms of the discretion in choosing methods for attaining firm national goals. *States and localities are given broad discretion to make decisions, while maintaining the minimum national air quality baselines designed to protect health and welfare, prevent discrimination among States, protect national*

the standards by a fixed date; and (2) to *allow States greater flexibility* for the former purposes than EPA's present interpretative regulations afford."

H.R. Rep. No. 95-294 at 211.<sup>27</sup> (Emphasis added.)

With regard to the latter purpose, there is no question that many states welcomed the additional flexibility provided by EPA's plantwide definition of "source." As EPA pointed out in its motion in the court below to stay issuance of the mandate, within one year of the promulgation of the amended definition (*i.e.*, by Oct. 14, 1982), eighteen states had adopted new source review programs based upon the amended rules. Respondent's Motion to Stay Issuance of the Mandate, at 2, *NRDC v. Gorsuch*, No. 81-2208 (D.C. Cir. motion filed November 2, 1982). Thirteen more states were in the process of revising their new source review programs in accordance with the regulations struck down by the court below. *Id.* n. 1. As EPA had specified in the preamble to its amendments, each state adopting a plantwide definition of "source" was required to demonstrate, in order to obtain EPA approval thereof, that reasonable further progress and attainment were ensured. *See* 46 Fed. Reg. at 50767.

Because EPA's imposition of the "dual" "source" definition upon the states impermissibly infringed upon the states'

---

*resources within States, and provide guidance on the technical and the economic implications of various national policies.*

*The problem of air pollution exists at the State and local level. That is where the public understands the problem. That is where the resources must be directed. The Federal Government has a responsibility to provide support for those regulatory activities, but it need not have an actual presence in all regulatory activities.*

S. Rep. No. 95-127, 95th Cong., 1st Sess. 10 (1977). (Emphasis added.)

<sup>27</sup> As the Conference Report makes clear, the preconstruction permit program for new and modified sources in nonattainment areas was taken primarily from the House bill. H.R. Rep. No. 95-564, 95th Cong., 1st Sess. at 157-58 (1977).

statutorily reserved discretion, EPA properly deleted these provisions in October, 1981. The decision of the court below, however, reinstates the "dual" definition and denies the states the flexibility that Congress intended them to have.

**IV. Contrary To *Train v. NRDC*, 421 U.S. 60 (1975), The Court Below Impermissibly Substituted Its Judgment For EPA's Reasonable Construction Of The Clean Air Act**

This Court, recognizing that the Clean Air Act is a complex and often ambiguous statute, has made clear that so long as EPA's construction of the Act is a "sufficiently reasonable" one, it must be upheld. *Train v. NRDC*, 421 U.S. at 87. The administrative record amply supports EPA's determination that the plantwide definition is a "sufficiently reasonable" one. See Chev. Pet. at 12-14 (discussion and record citations).

In rejecting EPA's plantwide "source" definition, however, the court below did not find, nor purport to find, any basis for its decision in the statutory language in Part D of the Clean Air Act, the legislative history of Part D, or the extensive administrative record before EPA. Instead, the court below struck down EPA's definition of "source" as *per se* invalid solely because of a "bright line" test drawn, in its view, by other panels of that court in two prior cases involving air quality. See Chev. App. at A-16 - A-17. These cases, *ASARCO, Inc. v. EPA*, 578 F.2d 319 (1978), and *Alabama Power Co. v. Costle*, 636 F.2d 323 (1979), according to the decision below, drew a line between programs designed to "improve" air quality, for which a plantwide "source" definition is precluded, and programs that only "maintain" air quality, for which a single plantwide "source" definition is required.<sup>28</sup> Chev. App. at A-2 - A-3, A-14 - A-15.

---

<sup>28</sup> As the court below stated, "We express no view on the decision we would reach if the line drawn in *Alabama Power* and *ASARCO* did not control our judgment." Chev. App. at A-4 n.7.

Neither *ASARCO* nor *Alabama Power*, however, involved the same regulatory or statutory provisions at issue here, and neither case, alone or in combination, purported to draw such a "bright line" distinction applicable to all other Clean Air Act programs. On the contrary, recognizing that the various programs under the Act are complex and require individual scrutiny, the panel in each case recognized EPA's discretion to define "source" and its component terms as appropriate for each particular program. See *Alabama Power*, 636 F.2d at 397-8; *ASARCO*, 578 F.2d at 324 n.17. In fact, this "bright line" distinction, which constituted the sole basis for the panel's decision, is fundamentally inconsistent with and fails to explain the results of the two cases that are supposed to have established it.

*Alabama Power* held the plantwide "source" definition to be required under Part C of the Act, 42 U.S.C. §§ 7470, *et seq.*, which deals with the protection of air quality where ambient air standards are met. EPA's October 1981 decision to adopt an identical definition of "source" for Part D was reasonable and should not have been vacated by the court below. The court failed to realize that with Part D, as with Part C,

"Congress wished to apply the permit process . . . only where industrial changes might increase pollution in an area, not where an existing plant changed its operations in ways that produced no pollution increase."

*Alabama Power*, 636 F.2d at 401.

*Alabama Power* also held that a narrow "source" definition was not consistent with the goals of the 1977 Amendments: *i.e.*, to allow the states increased flexibility to comply with air quality requirements in the most efficient and cost-effective manner. *Alabama Power*, 636 F.2d at 401-02. It distinguished *ASARCO* which involved standards for performance for new sources under Section 111, 42 U.S.C. § 7411—a program which applies to certain defined operations, wholly in addition to and apart from Parts C and D of the Act. *Alabama Power*, 636 F.2d at 402. The purpose of that program differs substantially from

both Parts C and D; it deals with technology-based standards applicable to all new construction of specifically-defined operations, regardless of where located.

Thus, the court below not only impermissibly substituted its judgment for that of EPA but also (1) decided the case in a manner which conflicts in principle with the decisions of earlier panels of the same court and (2) relied on those decisions to draw a differentiating line which those decisions do not support. This Court should grant certiorari because the decision below creates, and will continue to cause, irrational differences among several of the most important programs under the Clean Air Act.

**V. The Court Below Incorrectly Imposed A Substantially Higher Burden Upon EPA To Justify Revising Its Rule Than When Adopting It.**

Noting that EPA took a contrary position in adopting its October 1981 amendments from that it had taken when it adopted its 1980 "dual" "source" definition, the court below faulted EPA for failing to cite "any study, survey, or support for the opposite position." Chev. App. at A-18 n.41. Lacking this type of support, the court stated, the rationale provided by EPA "would not rise to the level of reasoned decision-making."<sup>28</sup> *Id.* The court seems to be holding EPA to a substantially higher, although unspecified, burden to justify its rescission of the "dual" definition of "source" than its initial adoption of that definition. However, this is plainly erroneous since, as

---

<sup>28</sup> In making these assertions, the court below overlooked the eighty one public and state comments received by EPA, the majority of which favored EPA's proposals to delete the "dual" definition of "source." See 46 Fed. Reg. at 50767. EPA also cited specific examples provided by commenters supporting and documenting EPA's rationale for rescinding the "dual" definition. *Id.* at 50768. In any event, if EPA's October 1981 rules lacked an acceptable measure of support, EPA's August 7, 1980 rules, which imposed the "dual" definition, also lacked that level of support. EPA cited no "study, survey, or support" when it adopted the "dual" definition in 1980.

the D.C. Circuit itself stated in a recent case, "It is well settled that an agency may alter or reverse its position if the change is supported by a reasoned explanation." *Environmental Defense Fund, Inc. v. Costle*, 657 F.2d 275, 289 (D.C. Cir. 1981) (citations omitted).

By requiring agencies to produce support stronger than "a reasoned explanation" for revisions to rules, the court below, contrary to this Court's strong admonition in *Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 540-49 (1978), judicially imposes unwarranted procedural obligations and, indeed, substantive obligations. It has fashioned a novel standard of review which, although totally without basis in the Administrative Procedure Act, *see, e.g.*, 5 U.S.C. § 706(2), appears well on the way to being law in the D.C. Circuit. *Cf.*, *State Farm Mutual Automobile Insurance Co. v. DOT*, 680 F.2d 206 (D.C. Cir. 1982), *cert. granted*, \_\_\_ U.S. \_\_\_, 51 U.S.L.W. 3353 (Nov. 9, 1982) (No. 82-354) (automobile airbag case). The decision below undermines the broad discretion accorded agencies in informal rulemaking proceedings and seriously hampers their ability to streamline or update their rules.

This Court has recognized that an agency may make and rely upon reasoned forecasts of future events and that such a forecast "necessarily involves deductions based on the expert knowledge of the Agency." *FCC v. WNCN Listeners Guild*, 450 U.S. 582, 595 (1981) (footnote omitted), *quoting*, *FCC v. National Citizens Committee for Broadcasting*, 436 U.S. 775, 814 (1978), *quoting*, *FPC v. Transcontinental Gas Pipeline Corp.*, 365 U.S. 1, 29 (1961). EPA has rationally and with a full explanation changed its expert judgment as to the best policy to implement Part D. Mere change does not mean its action was defective nor that a substantially more stringent standard of review should be applied by the reviewing court.

Where, as here, an agency rationally concludes that a prior forecast of public benefit is of doubtful validity and, fully explaining its action, seeks to withdraw those portions of a rule

which were premised on that forecast, the agency should not be precluded from acting by a court-imposed requirement that it has a substantially greater burden to justify revision of a rule or portion thereof than its burden when justifying the initial promulgation of the rule.

### CONCLUSION

For the foregoing reasons, this petition for a writ of certiorari should be granted.

**A. STATUTORY PROVISIONS: PERTINENT SECTIONS  
OF THE CLEAN AIR ACT**

**1. Section 101(a)(3), 42 U.S.C. § 7401(a)(3), as amended:**

**§ 7401. Congressional findings and declaration of purpose**

(a) The Congress finds—

\* \* \*

(3) that the prevention and control of air pollution at its source is the primary responsibility of States and local governments;

\* \* \*

**2. Section 107(a), (d), 42 U.S.C. § 7407(a), (d), as amended:**

**§ 7407. Air quality control regions**

(a) Each State shall have the primary responsibility for assuring air quality within the entire geographic area comprising such State by submitting an implementation plan for such State which will specify the manner in which national primary and secondary ambient air quality standards will be achieved and maintained within each air quality control region in such State.

\* \* \*

(d)(1) For the purpose of transportation control planning, part D of this subchapter (relating to nonattainment), part C of this subchapter (relating to prevention of significant deterioration of air quality), and for other purposes, each State, within one hundred and twenty days after August 7, 1977, shall submit to the Administrator a list, together with a summary of the available information, identifying those air quality control regions, or portions thereof, established pursuant to this section in such State which on August 7, 1977—

(A) do not meet a national primary ambient air quality standard for any air pollutant other than sulfur dioxide or particulate matter;

(B) do not meet, or in the judgment of the State may not in the time period required by an applicable implementation plan attain or maintain, any national primary ambient air quality standard for sulfur dioxide or particulate matter;

(C) do not meet a national secondary ambient air quality standard;

(D) cannot be classified under subparagraph (B) or (C) of this paragraph on the basis of available information, for ambient air quality levels for sulfur oxides or particulate matter; or

(E) have ambient air quality levels better than any national primary or secondary air quality standard other than for sulfur dioxide or particulate matter, or for which there is not sufficient data to be classified under subparagraph (A) or (C) of this paragraph.

(2) Not later than sixty days after submittal of the list under paragraph (1) of this subsection the Administrator shall promulgate each such list with such modifications as he deems necessary. Whenever the Administrator proposes to modify a list submitted by a State, he shall notify the State and request all available data relating to such region or portion, and provide such State with an opportunity to demonstrate why any proposed modification is inappropriate.

(4)<sup>1</sup> Any region or portion thereof which is not classified under subparagraph (B) or (C) of paragraph (1) of this subsection for sulfur dioxide or particulate matter within one hundred and eighty days after August 7, 1977, shall be deemed to be a region classified under subparagraph (D) of paragraph (1) of this subsection.

(5) A State may from time to time review, and as appropriate revise and resubmit, the list required under this subsection. The Administrator shall consider and promulgate such revised list in accordance with this subsection.

---

<sup>1</sup> Subsec. (d) enacted without a par. (3).

3. Sections 110(a)(2)(A), (B), (I), (3)(A), 42 U.S.C.  
§ 7410(a)(2)(A), (B), (I), (3)(A), as amended:

§ 7410. State implementation plans for national primary and secondary ambient air quality standards

\* \* \*

(2) The Administrator shall, within four months after the date required for submission of a plan under paragraph (1), approve or disapprove such plan or each portion thereof. The Administrator shall approve such plan, or any portion thereof, if he determines that it was adopted after reasonable notice and hearing and that—

(A) except as may be provided in subparagraph (I), (i) in the case of a plan implementing a national primary ambient air quality standard, it provides for the attainment of such primary standard as expeditiously as practicable but (subject to subsection (e) of this section) in no case later than three years from the date of approval of such plan (or any revision thereof to take account of a revised primary standard); and (ii) in the case of a plan implementing a national secondary ambient air quality standard, it specifies a reasonable time at which such secondary standard will be attained;

(B) it includes emission limitations, schedules, and timetables for compliance with such limitations, and such other measures as may be necessary to insure attainment and maintenance of such primary or secondary standard, including, but not limited to, transportation controls, air quality maintenance plans, and preconstruction review of direct sources of air pollution as provided in subparagraph (D);

\* \* \*

(I) It provides that after June 30, 1979, no major stationary source shall be constructed or modified in any nonattainment area (as defined in section 7501(2) of this title) to which such plan applies, if the emissions from such facility will cause or contribute to concentrations of any pollutant for which a national ambient air quality standard is exceeded in such area, unless, as of the time of application for a permit for such construction

or modification, such plan meets the requirements of part D of this subchapter (relating to nonattainment areas);

\* \* \*

(3)(A) The Administrator shall approve any revision of an implementation plan applicable to an air quality control region if he determines that it meets the requirements of paragraph (2) and has been adopted by the State after reasonable notice and public hearings.

**4. Sections 111(a)(1)(A), (B), (2), (3), (4), (6); 42 U.S.C. § 7411(a)(1)(A), (B), (2), (3), (4), (6), as amended:**

**§ 7411. Standards of performance for new stationary sources**

(a) For purposes of this section:

(1) The term "standard of performance" means—

(A) with respect to any air pollutant emitted from a category of fossil fuel fired stationary sources to which subsection (b) of this section applies, a standard—

(i) establishing allowable emission limitations for such category of sources, and

(ii) requiring the achievement of a percentage reduction in the emissions from such category of sources from the emissions which would have resulted from the use of fuels which are not subject to treatment prior to combustion,

(B) with respect to any air pollutant emitted from a category of stationary sources (other than fossil fuel fired sources)

to which subsection (b) of this section applies, a standard such as that referred to in subparagraph (A)(i); and

\* \* \*

(2) The term "new source" means any stationary source, the construction or modification of which is commenced after the publication of regulations (or, if earlier,

proposed regulations) prescribing a standard of performance under this section which will be applicable to such source.

(3) The term "stationary source" means any building, structure, facility, or installation which emits or may emit any air pollutant.

(4) The term "modification" means any physical change in, or change in the method of operation of, a stationary source which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted.

\* \* \*

(6) The term "existing source" means any stationary source other than a new source.

**5. Part D, Sections 171-173; 42 U.S.C. §§ 7501-7503, as amended:**

**PART D—PLAN REQUIREMENTS FOR  
NONATTAINMENT AREAS**

**§ 7501. Definitions**

For the purpose of this part and section 7410(a)(2)(I) of this title—

(1) The term "reasonable further progress" means annual incremental reductions in emissions of the applicable air pollutant (including substantial reductions in the early years following approval or promulgation of plan provisions under this part and section 7410(a)(2)(I) of this title and regular reductions thereafter) which are sufficient in the judgment of the Administrator, to provide for attainment of the applicable national ambient air quality standard by the date required in section 7502(a) of this title.

(2) The term "nonattainment area" means, for any air pollutant an area which is shown by monitored data or which is calculated by air quality modeling (or other methods determined by the Administrator to be reliable) to exceed any national ambient air quality standard for such pollutant. Such term includes any area identified

under subparagraphs (A) through (C) of section 7407(d)(1) of this title.

(3) The term "lowest achievable emission rate" means for any source, that rate of emissions which reflects—

(A) the most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable, or

(B) the most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event shall the application of this term permit a proposed new or modified source to emit any pollutant in excess of the amount allowable under applicable new source standards of performance.

(4) The terms "modification" and "modified" mean the same as the term "modification" as used in section 7411(a)(4) of this title.

#### **§ 7502. Nonattainment plan provisions**

(a)(1) The provisions of an applicable implementation plan for a State relating to attainment and maintenance of national ambient air quality standards in any nonattainment area which are required by section 7410(a)(2)(I) of this title as a precondition for the construction or modification of any major stationary source in any such area on or after July 1, 1979, shall provide for attainment of each such national ambient air quality standard in each such area as expeditiously as practicable, but, in the case of national primary ambient air quality standards, not later than December 31, 1982.

(2) In the case of the national primary ambient air quality standard for photochemical oxidants or carbon monoxide (or both) if the State demonstrates to the satisfaction of the Administrator (on or before the time required for submission of such plan) that such attainment is not possible in an area with respect to either or both of such pollutants within the period prior to December 31, 1982, despite the implementation of all reasonably available

measures, such provisions shall provide for the attainment of the national primary standard for the pollutant (or pollutants) with respect to which such demonstration is made, as expeditiously as practicable but not later than December 31, 1987.

(b) The plan provisions required by subsection (a) of this section shall—

- (1) be adopted by the State (or promulgated by the Administrator under section 7410(c) of this title) after reasonable notice and public hearing;

- (2) provide for the implementation of all reasonably available control measures as expeditiously as practicable;

- (3) require, in the interim, reasonable further progress (as defined in section 7501(1) of this title) including such reduction in emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology;

- (4) include a comprehensive, accurate, current inventory of actual emissions from all sources (as provided by rule of the Administrator) of each such pollutant for each such area which is revised and resubmitted as frequently as may be necessary to assure that the requirements of paragraph (3) are met and to assess the need for additional reductions to assure attainment of each standard by the date required under subsection (a) of this section;

- (5) expressly identify and quantify the emissions, if any, of any such pollutant which will be allowed to result from the construction and operation of major new or modified stationary sources for each such area;

- (6) require permits for the construction and operation of new or modified major stationary sources in accordance with section 7503 of this title (relating to permit requirements);

- (7) identify and commit the financial and manpower resources necessary to carry out the plan provisions required by this subsection;

(8) contain emission limitations, schedules of compliance and such other measures as may be necessary to meet the requirements of this section;

\* \* \*

### **§ 7503. Permit requirements**

The permit program required by section 7502(b)(6) of this title shall provide that permits to construct and operate may be issued if—

(1) the permitting agency determines that—

(A) by the time the source is to commence operation, total allowable emissions from existing sources in the region, from new or modified sources which are not major emitting facilities and from the proposed source will be sufficiently less than total emissions from existing sources allowed under the applicable implementation plan prior to the application for such permit to construct or modify so as to represent (when considered together with the plan provisions required under section 7502 of this title) reasonable further progress (as defined in section 7501 of this title); or

(B) that emissions of such pollutant resulting from the proposed new or modified major stationary source will not cause or contribute to emissions levels which exceed the allowance permitted for such pollutant for such area from new or modified major stationary sources under section 7502(b) of this title;

(2) the proposed source is required to comply with the lowest achievable emission rate;

(3) the owner or operator of the proposed new or modified source has demonstrated that all major stationary sources owned or operated by such person (or by any entity controlling, controlled by, or under common control with such person) in such State are subject to emission limitations and are in compliance, or on a schedule for compliance, with all applicable emission limitations and standards under this chapter; and

(4) the applicable implementation plan is being carried out for the nonattainment area in which the proposed source is to be constructed or modified in accordance with

the requirements of this part. Any emission reductions required as a precondition of the issuance of a permit under paragraph (1)(A) shall be legally binding before such permit may be issued.

**6. Section 302(j); 42 U.S.C. § 7602(j), as amended:**

(j) Except as otherwise expressly provided, the terms "major stationary source" and "major emitting facility" mean any stationary facility or source of air pollutants which directly emits, or has the potential to emit, one hundred tons per year or more of any air pollutant (including any major emitting facility or source of fugitive emissions of any such pollutant, as determined by rule by the Administrator).

**7. Section 307(b)(1), (2); 42 U.S.C. § 7607(b)(1), (2), as amended:**

**§ 7607. Administrative proceedings and judicial review**

\* \* \*

(b)(1) A petition for review of action of the Administrator in promulgating any national primary or secondary ambient air quality standard, any emission standard or requirement under section 7412 of this title, any standard of performance or requirement under section 7411 of this title, any standard under section 7521 of this title (other than a standard required to be prescribed under section 7521(b)(1) of this title), any determination under section 7521(b)(5) of this title, any control or prohibition under section 7545 of this title, any standard under section 7571 of this title, any rule issued under section 7413, 7419, or 7420 of this title, or any other nationally applicable regulations promulgated, or final action taken, by the Administrator under this chapter may be filed only in the United States Court of Appeals for the District of Columbia. A petition for review of the Administrator's action in approving or promulgating any implementation plan under section 7410 of this title or section 7411(d) of this title, any order under section 7411(j) of this title, under section 7412(c) of this title, under section 7413(d) of this title, under section 7419 of this title, or under section 7420 of this title, or his action under section 119(c)(2)(A), (B), or (C) (as in effect before August 7, 1977) or under regulations thereunder, or any other final action of the Adminis-

trator under this chapter (including any denial or disapproval by the Administrator under subchapter I of this chapter) which is locally or regionally applicable may be filed only in the United States Court of Appeals for the appropriate circuit. Notwithstanding the preceding sentence a petition for review of any action referred to in such sentence may be filed only in the United States Court of Appeals for the District of Columbia if such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination. Any petition for review under this subsection shall be filed within sixty days from the date notice of such promulgation, approval, or action appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review under this subsection shall be filed within sixty days after such grounds arise.

(2) Action of the Administrator with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in civil or criminal proceedings for enforcement.

## **B. REGULATORY PROVISIONS**

### **1. Proposed Rule, 46 Fed. Reg. 16280 (March 12, 1981):**

40 CFR Parts 51 and 52

Requirements for Preparation, Adoption, and Submittal of Implementation Plans; Approval and Promulgation of Implementation Plans

**AGENCY:** Environmental Protection Agency.

**ACTION:** Proposed rules.

**SUMMARY:** EPA regulations published on August 7, 1980 (45 FR 52676) adopted a different definition of "source" for the PSD rules (which require review of new or modified major sources in clean air areas) than for the nonattainment area new source review rules (which govern review of new or modified major sources in area where air quality does not meet Federal

standards). Under the PSD rules a source is, in essence, an entire plant. Under the current nonattainment area rules a source is *either* an entire plant *or* an individual piece of process equipment within the plant. EPA is now proposing to conform the nonattainment area definition of source to that contained in the PSD rules by changing the nonattainment area definition of source to be an entire plant only. The practical significance of this change will be to reduce the coverage of nonattainment area new source review. The same change will also apply to the rules governing the construction moratorium under Section 110(a)(2)(I) of the Act (which prohibits major new construction in nonattainment area lacking EPA-approved State Implementation Plans), which will similarly shrink the coverage of the moratorium. In addition, EPA proposes to drop its current requirement that "reconstructions" be subject to nonattainment area new source review.

**DATES:** The deadline for submitting comments is April 13, 1981.

**ADDRESS:** Comments should be addressed to Michael Trutna, Standards Implementation Branch (MD-15), Office of Air Quality Planning and Standards, Research Triangle Park, N.C. 27711, 919-541-5292.

**FOR FURTHER INFORMATION CONTACT:** Michael Trutna (919-541-5292) or Eric Smith (202-755-0788).

**SUPPLEMENTARY INFORMATION:** On August 7, 1980 EPA published amended rules affecting PSD new source review, nonattainment area new source review and the construction moratorium. 45 FR 52676. The Prevention of Significant Air Quality Deterioration (PSD) program requires new or modified "major"<sup>1</sup> air pollution sources locating in areas where

---

<sup>1</sup> "Major" sources for PSD purpose are those which emit more than either 100 tons per year or 250 tons per year (depending on the type of source) of any pollutant. See Section 169(1) of the Act. 40 CFR 51.24(b)(1), 52.21(b)(1)).

national ambient air quality standards (NAAQS) are being attained (or where air quality data is insufficient to determine whether or not NAAQS are being attained) to obtain construction permits which meet the requirements of Part C of Title I of the Clean Air Act. The basic purpose of the PSD program is to protect air quality in clean air areas. In areas where NAAQS are not being attained new or modified "major"<sup>2</sup> sources which would emit the pollutant(s) for which the area is nonattainment must obtain construction permits under Section 173 of the Act. In addition, where a nonattainment area lacks an EPA-approved State Implementation Plan (SIP) that meets the requirements of Part D of Title I of the Act, new or modified major sources that would emit the nonattainment pollutant(s) may not construct at all. This "construction moratorium" is required by Section 110(a)(2)(I) of the Act. See 40 CFR 52.24. The definitions in EPA's regulations governing the applicability of the construction moratorium are the same as those used in the nonattainment new source review rules. 40 CFR 52.24(f).

EPA's amended rules define "source" differently for PSD and nonattainment purposes. The difference revolves around the treatment of a plant that contains a number of individual pieces of process equipment that themselves each emit more than 100 tons per year. For PSD, EPA generally defines "source" in terms of an entire plant. For the nonattainment program, however, EPA defines "source" as both the entire plant and each of those "major" pieces of process equipment within it.

---

Each new "major" source must get a permit. In addition, any modification to a major source that causes a "significant" increase in emissions must get a permit. "Significant" increases in emissions are specified at 40 CFR 51.24(b)(23)(i), 52.21(b)(23)(i).

<sup>2</sup> "Major" sources for nonattainment purpose are those which emit more than 100 tons per year. 40 CFR 51.13(1)(v).

The "modification" test for nonattainment areas is the same as for PSD. See 40 CFR 51.18(j)(1)(xii).

An example will show how these different definitions work. Suppose that a plant has three pieces of process equipment each of which has a potential to emit about 400 tons per year. The owners of the plant decide to expand operations at one piece of equipment resulting in an increase of 70 tons per year of a criteria pollutant,<sup>3</sup> and they further intend to curtail operations at another piece of equipment so as to reduce emissions of the same pollutant by 70 tons per year. If the plant were subject to PSD requirements, these changes would not "modify" any "source." The plant as a whole is the source, and since the reduction at the second piece of equipment balances the increase at the first, there is no significant plant-wide increase in emissions. As noted earlier, a change at a source is not a modification subject to review unless it results in a significant overall increase in emissions. Thus, no permit would be needed. But if the plant were located in an area which is nonattainment for the pollutant involved, then each piece of process equipment is independently viewed as a source and the change at the first piece of equipment would have to undergo preconstruction review, because the piece of equipment is *itself* a major source and there is a significant net increase in emissions at that source. Compensating reductions obtained elsewhere at the plant could not be used to escape review, because these reductions did not occur at the same "source."

There would be a similar potential for differing results if the plant added a new piece of equipment with a potential to emit 300 tons per year. For PSD purposes, the relevant "source" is the plant, so that if the plant reduced emissions by 300 tons per year at the existing equipment, there would be no net increase at the source. But for nonattainment purposes, the new piece of equipment is itself a major source and so would be subject to review (or the construction moratorium) even if there had been no significant increase in emissions from the plant as a whole.

---

<sup>3</sup> A criteria pollutant is one for which EPA has established a NAAQS.

These different definitions of source meant that more new construction projects are subject to review in nonattainment areas (or, if there is no EPA-approved Part D SIP, more new construction projects are subject to the construction moratorium) than in areas subject to PSD requirements.

EPA also requires new source review in nonattainment areas based on a capital investment test of "reconstruction". Specifically, whenever a company rebuilds a "source" so that more than 50% of the capital in it represents new investment, EPA will require new source review no matter how emissions are affected.

#### The Proposed Amendment

EPA today is proposing to change the definition of "source" contained in the rules governing nonattainment area new source review and the construction moratorium so as to make that definition conform to that contained in the PSD rules. The result will be to eliminate the differences in coverage between the PSD and nonattainment programs that were described above. The change is being carried out by amending the definition of the terms "building", "structure", "facility" and "installation", which are the components of the term "source." EPA is also proposing to delete the definition of "reconstruction."

#### Discussion

The decision to reconsider the scope of nonattainment area new source review has been made in the context of a Government-wide reexamination of regulatory burdens and complexities that is now in progress. EPA has also reevaluated all of the arguments on all sides of these definitional issues. The Agency has concluded that the amendments to the August 7 rules being proposed today will substantially reduce the burdens imposed on the regulated community without significantly interfering with timely achievement of the goals of the Clean Air Act.

The issue of the proper scope of the nonattainment area definition of "source" is not a clear-cut legal question. The statute does not provide an explicit answer, nor is the issue squarely addressed in the legislative history. The D.C. Circuit (in *Alabama Power Co. v. Costle*) has stated by implication that EPA has substantial discretion to define the constituent elements of this term.

The question thus involves a judgment as to how to best carry out the Act. Two issues have been reexamined here. The first is whether the definition of "source" in nonattainment areas should be modified to conform to the one in PSD areas. The second is whether new source review based on "reconstruction" should be required at all.<sup>4</sup>

EPA believes for the following reasons that the proposed change in the definition of "source" is appropriate.

1. The August 7 definition forbids *any* construction or modification of major pieces of process equipment in areas where the construction moratorium is in effect, even where no increase in emissions at a plant would result. There are a substantial number of such nonattainment areas nationwide at present.

2. Even outside of these "construction moratorium" areas under the present regulatory scheme the August 7 definition can act as a disincentive to new investment and modernization by discouraging modifications to existing facilities.

3. For both these reasons, under the current overall regulatory system, the August 7 definition can actually retard progress in air pollution control by discouraging replacement of older, dirtier processes or pieces of equipment with new, cleaner ones.

---

<sup>4</sup>Of course, States always retain the right to choose to impose more stringent new source requirements than Federal rules mandate.

4. The proposed definition would simplify EPA's rules by using the same definition of "source" for PSD, nonattainment new source review and the construction moratorium. This reduces confusion and inconsistency.

5. States will remain subject to the requirement that for all nonattainment areas they demonstrate attainment of NAAQS as expeditiously as practicable and show reasonable further progress toward such attainment. Thus, the proposed change in the mandatory scope of nonattainment new source review should not interfere with the fundamental purpose of Part D of the Act.

6. New Source Performance Standards (NSPS) will continue to apply to many new or modified facilities and will assure use of the most up-to-date pollution control techniques regardless of the applicability of nonattainment area new source review.

7. In order to avoid nonattainment area new source review, a major plant undergoing modification must show that it will not experience a significant net increase in emissions. Where overall emissions increase significantly, review will continue to be required.

For these reasons EPA has reconsidered the concerns it expressed in the August 7 preamble (See 45 FR 52697-8) and has decided that the "dual definition" is excessively and unnecessarily burdensome.

In light of the change to the nonattainment area definition of source, there is good reason to abandon the "reconstruction" test for nonattainment area new source review. That test by itself only requires review in cases where there is reconstruction, but a "significant" increase in emissions is absent. With a plant-wide definition of source, the reconstruction provision would only trigger review in cases of plant-wide reconstruction. Few instances of plant-wide reconstruction are expected. Thus, there is little justification for the added complexity this provision entails. Moreover, this change will further reduce

inconsistency with the PSD rules which do not have a reconstruction provision.

The Clean Air Act, in Section 111, recognizes an independent, long-term interest in making sure that new facilities install state-of-the-art pollution controls when they are built. This results in the most cost-effective long-term air quality improvement by controlling pollution at the design stage, rather than requiring costly retrofits. Of course, this approach, unlike the nonattainment area requirements of Part D, is not based on the location of particular sources.

For these reasons, EPA believes that a "reconstruction" definition is appropriate for the new source performance standards under Section 111. However, the arguments for it are considerably weaker where a program of review basically designed to meet air quality standards in particular places is at issue, and EPA proposes to drop it there.

EPA solicits comments on the proposed rule. All such comments will be carefully considered prior to any final action.

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that the attached proposed rule will not, if promulgated, have a significant economic impact on a substantial number of small entities. This proposal will reduce regulatory burdens since fewer sources will be subject to new source review and the construction moratorium.

The Director of the Office Management and Budget, acting under Section 8(b) of Executive Order 12291, has granted this proposal an exemption from the provisions of that order because of its burden-relieving and deregulatory nature.

This Notice of Proposed Rulemaking is issued under Section 301 of the Clean Air Act, 42 U.S.C. Sec. 7601.

Dated: March 6, 1981.

Walter C. Barber, Jr.,

*Acting Administrator.*

1. Section II, Subsection A of the Emissions Offset Interpretative Ruling, 40 CFR Part 51 Appendix S, as revised 44

FR 3274 (January 16, 1979), 45 FR 31307 (May 13, 1980), and 45 FR 52741 (August 7, 1980) is proposed to be amended as follows:

- a. By changing the words "Building, structure or facility" at the beginning of paragraph 2 to read "Building, structure, facility or installation";
- b. By removing paragraph 3 and renumbering the succeeding paragraphs accordingly, and
- c. By removing paragraph 9 and renumbering the succeeding paragraphs accordingly.

**§ 51.18 [Amended]**

2. Section 40 CFR 51.18(j)(1) is proposed to be amended as follows:

- a. By changing the words "Building, structure or facility" at the beginning of subparagraph (ii) to read "Building, structure, facility or installation";
- b. By removing subparagraph (iii) and renumbering the succeeding subparagraphs accordingly, and
- c. By removing subparagraph (ix) and renumbering the succeeding subparagraphs accordingly.

**§ 52.24 [Amended]**

3. Section 40 CFR 52.24(f) is proposed to be amended as follows:

- a. By changing the words "Building, structure or facility" at the beginning of subparagraph (2) to read "Building, structure, facility or installation";
- b. By removing subparagraph (3) and renumbering the succeeding subparagraphs accordingly, and
- c. By removing subparagraph (9) and renumbering the succeeding subparagraphs accordingly.

[FR Doc. 81-7764 Filed 3-11-81; 8:45 am]

2. Final Rule (excerpts): 46 Fed. Reg. 50766, 50767, 50768, 50771 (October 14, 1981):

**ENVIRONMENTAL PROTECTION AGENCY**

40 CFR Parts 51 and 52

**Requirements for Preparation,  
Adoption and Submittal of  
Implementation Plans and Approval  
and Promulgation of Implementation  
Plans**

**AGENCY:** Environmental Protection  
Agency.

**ACTION:** Final rule.

**SUMMARY:** On August 7, 1980 (45 FR 52676), EPA promulgated rules for review of major new sources and major modifications in areas where air quality does not meet federal standards (nonattainment areas). Those rules defined "source" in essence as *either* an entire plant *or* an individual piece of process equipment within the plant. On March 12, 1981 (46 FR 16280), EPA proposed to change the definition of source to be an entire plant only. That proposal is being promulgated as a final rule today. The practical significance of this change will be to reduce the coverage of nonattainment area new source review (NSR). The same change will also apply to the rules governing the construction moratorium under Section 110(a)(2)(I) of the Clean Air Act (which prohibits major new construction in nonattainment areas lacking a State Implementation Plan (SIP) approved by EPA under Part D of the Act). This change will similarly shrink the coverage of the moratorium.

EPA's August 7 rules also required reconstructed facilities to undergo nonattainment area NSR. As was proposed on March 12, EPA is also deleting that requirement today. These changes will allow states to reduce the regulatory burden of

new source review programs without impeding timely attainment and maintenance of air quality standards.

**DATES:** This rule is effective on October 14, 1981.

**FOR FURTHER INFORMATION CONTACT:** Kirt Cox, Standards Implementation Branch (MD-15), Office of Air Quality Planning and Standards, Research Triangle Park, N.C. 27711, 919-541-5592.

## **SUPPLEMENTARY INFORMATION:**

### **I. Background**

#### *A. Definition of Source*

Under the Clean Air Act, all major new stationary sources and modifications to existing major sources must obtain a permit before they may construct—a Prevention of Significant Deterioration (PSD) permit if the source or modification locates in an area which is cleaner than a national ambient air quality standard (NAAQS), or a nonattainment permit if the source or modification locates in a nonattainment area. The Act defines a "stationary source" as "any building, structure, facility, or installation which emits or may emit any air pollutant." Section 111(a)(3).<sup>1</sup>

In *Alabama Power Co. v. Costle*, 636 F.2d 323 (D.C. Cir. 1979), the United States Court of Appeals for the District of Columbia Circuit held that EPA has discretion to define the constituent terms of the definition of "source" (*i.e.*, the terms "building," "structure," "facility," and "installation") so as to meet the purposes of the various NSR programs mandated by the Act. On August 7, 1980, EPA promulgated amended rules affecting PSD NSR, nonattainment NSR, and the construction moratorium to take into account the court's holding. 45 FR

---

<sup>1</sup> Where a state does not have an approved plan in place for cleaning up a nonattainment area, the Act imposes a moratorium on construction of major new sources and modifications in that nonattainment area (construction moratorium).

52676 (August 7 rules). For PSD purposes, EPA defined "source" in essence as an entire plant (the "plantwide" definition). But for nonattainment purposes, EPA defined "source" as both the entire plant and each piece of process equipment at the plant (the "dual" definition).<sup>2</sup>

The practical significance of these different definitions largely lies in the number of modifications each definition would bring in for review. EPA's August 7 rules define a "modification" as a significant net increase in emissions at a source. *See, e.g.*, 45 FR 52747. Since the PSD definition defines "source" in essence as a plant, only net increases occurring at the entire plant need a PSD permit. For example, if a plant increased emissions at one piece of process equipment, but reduced emissions by the same amount at another piece of process equipment at the plant, then there would be no net increase in emissions at the plant, and therefore no modification to the "source." But under the nonattainment definition, the piece of process equipment itself is a "source," which means that only equivalent reductions at that particular piece of process equipment would enable the source to avoid the need for a nonattainment permit. As a result, the nonattainment definition affords fewer opportunities for a source to use a reduction in emissions to compensate for an increase at the source, and therefore avoid the need for a permit.

EPA promulgated a plantwide definition for the PSD program pursuant to *Alabama Power*. *See* 636 F.2d at 397; 45 FR 52695, 52730, 52736 (August 7, 1980). But EPA adopted the more inclusive dual definition for nonattainment areas in order to most effectively use NSR to aid in the cleanup of nonattainment areas. *See* 45 FR 52697 (August 7, 1980). EPA asserted

---

<sup>2</sup> Formally, for PSD purposes, EPA defined each of the terms "building," "structure," "facility," and "installation" as an entire plant. However, for nonattainment purposes, EPA defined "Building structure, or facility" as an entire plant and "installation" as a piece of process equipment.

that a narrow definition of source brings in more sources for review, which will enable states to ensure more reductions in emissions through new source permitting. These additional reductions from permitting were said to arise from the greater applicability of the provision in Section 173(1)(A) of the Act (which was adopted by most states) that a new source or modification must obtain offsetting reductions in emissions which are greater than the increase from the new source or modification. EPA further noted that the permit requirement also brings into play Section 173(3) of the Act, under which the owner of a proposed new source or modification must certify that all other sources owned, operated, or controlled by him are in compliance with the applicable State Implementation Plan. Finally, EPA felt that increased applicability of the construction moratorium through use of a narrow definition of source would serve as a strong incentive for states to develop plans to clean up their nonattainment areas.

However, on March 12, 1981, EPA proposed to delete the dual definition for nonattainment areas and to substitute a plantwide definition identical to that of the PSD program. 46 FR 16280, EPA stated that it could, by adopting a plantwide definition, reduce these regulatory burdens and complexities associated with NSR and the construction moratorium without interfering with timely attainment of the NAAQS in accordance with the Act. In particular, EPA argued that by bringing in more sources for review or subjecting them to the construction moratorium, the dual definition was discouraging replacement of older, dirtier processes with new cleaner ones. It thereby acted as a disincentive to new investment and modernization and retarded progress toward clean air. In addition, EPA noted that a source would still be subject to any applicable new source performance standards (NSPS) and that significant net increases at a plant as well as wholly new plants, still would undergo nonattainment review. Third, EPA stated that its proposal would simplify the regulatory process by adopting the same definitions for PSD and nonattainment permits. Finally, EPA stated that even if a state adopted a plant-

wide definition, it nonetheless had to demonstrate attainment of the NAAQS and reasonable further progress (RFP) towards attainment by the statutory deadlines. For these reasons, EPA concluded that the dual definition was unnecessarily burdensome, and so should be deleted.

### *B. Reconstruction*

EPA's August 7 rules also required reconstructed or replacement facilities to undergo NSR in nonattainment areas as if they were new sources. Specifically, the rules provided that whenever a company rebuilt a "source" so that more than 50 percent of its capital cost represented new investment, that rebuilt source had to obtain a nonattainment permit. EPA did not adopt a similar provision for PSD, because few if any whole plants are likely to be rebuilt.

On March 12, 1981, EPA proposed to delete this requirement. EPA stated that since it was proposing to use a plantwide definition for nonattainment areas, and since few entire plants are likely to be rebuilt, there is little need for review of reconstructions. In addition, this change would further reduce the differences between PSD and nonattainment NSR.

## **II. Today's Action**

### *A. Definition of Source*

EPA has decided to adopt the plantwide definition of source and to delete the reconstruction requirement as it proposed last March. After evaluation of the comments received, EPA has concluded that two concerns warrant this approach to NSR.

First, today's action means that both the PSD and nonattainment programs will use the same definition of "source." This alone will reduce regulatory complexity. Sources will no longer have to figure out what an "installation" is, which should lessen any confusion engendered by EPA's August 7 rules.

Second, and more important, by removing the requirement that states adopt a dual definition, EPA is acting consistently

with the purposes of Part D of the Act. Congress expressly provided that states are to play the primary role in pollution control. Sections 101(a)(3), 101(b). It also intended that states retain the maximum possible flexibility to balance environmental and economic concerns in designing plans to clean up nonattainment areas. *See e.g.*, Sen. Rep. 95-127 at pp. 10-11; *cf. NRDC v. Train*, 421 U.S. 60 (1975). Today's action follows this mandate by allowing states much greater flexibility in developing their nonattainment area NSR programs and attainment demonstrations. Since demonstration of attainment and maintenance of the NAAQS continues to be required, deletion of the dual definition increases state flexibility without interfering with timely attainment of the ambient standards, and so is consistent with Part D.

This rulemaking in no way affects either the current status of any EPA-approved SIP or the state's duty to assure RFP and attainment of the NAAQS by the statutory deadlines. All state plans containing the dual definition and the reconstruction provisions remain fully valid after this rulemaking. States may, however, choose to adopt a plantwide definition, provided that they submit that change to EPA as a SIP revision.

States choosing to delete the dual definition must demonstrate that their plans, as revised, continue to demonstrate RFP and attainment. Many state plans are based in part upon a projection of reductions in emissions obtained through the state's NSR program. This projection in turn rested upon an anticipated number of permit applications. Use of a plantwide definition would mean that many sources will no longer need a permit. Unless counterbalanced by other consequences of the deletion (*e.g.*, more rapid construction of new clean emission units), this may result in the loss of reductions originally expected by the state. In other instances, where RFP demonstrations were more general in nature, states relied on the NSR program to assist in their enforcement efforts and to identify additional more efficient means to control emissions. In either case, a state's RFP demonstration, which was predicated on those assumptions for NSR coverage, might no longer

apply; and the state might have to obtain or guarantee those reductions in other ways (such as requiring additional reductions from existing sources and stepping up enforcement efforts). States changing from a dual to a plantwide definition must therefore reassess their general attainment strategies and revise them as necessary to ensure RFP and attainment by the statutory deadlines.

A related problem may arise if a state decides to rescind existing nonattainment permits. A modification which required a permit under the dual definition may not have needed one had the plantwide definition been in effect, and some states may choose to rescind those permits and reissue them with conditions more favorable to the affected sources (such as deleting the requirement that the source install the technology assuring the lowest achievable emission rate (LAER)). However, the emissions reductions required by that permit may have been included in the state's RFP demonstration, and rescission might therefore damage that demonstration. States should thus be careful that, in designing any rescission procedure, they do not interfere with RFP and attainment. Any such rescission procedure must be submitted to EPA as a SIP revision and must assure that each rescission is consistent with the state's RFP demonstration.<sup>3</sup>

#### *B. Reconstruction*

EPA is also taking a final action today to delete the requirement that reconstructed facilities (as that term is defined in the rules) be subject to nonattainment requirements. The rationale for that decision is the one offered in the proposal: Adoption of the plantwide definition means that the reconstruction requirement applies only to entire plants which are rebuilt. Since few if any such reconstructions are antici-

---

<sup>3</sup> Permit recessions granted under an EPA-approved permit recession procedure would not have to be submitted to EPA as a SIP revision.

pated, there is little reason to retain this requirement. In addition, deletion of the requirement makes the PSD and nonattainment rules the same in this respect.

As with the dual definition, some state plans may be based upon emission reductions obtained from the reconstruction provision. States choosing to delete this requirement should therefore assess and adjust their RFP and attainment demonstrations as necessary.

### III. Response To Comments

EPA received 81 comments in response to its March 12 proposal, the majority of which favored deletion of the dual definition and the reconstruction requirement. The particular comments, as well as EPA's response, are discussed below.

#### A. *Modernization*

Many commenters who agreed with the proposal stated that it would be conducive to modernization of existing plants and so would enhance economic efficiency. These commenters also agreed that the dual definition acted as a disincentive to replacement of outmoded dirty facilities with newer cleaner ones, and some cited specific examples where this in fact has happened. Other commenters, however, noted that EPA had cited no data to corroborate its claim that the dual definition impeded modernization, and argued, also without supporting data, that the direct cost of offsets and of the installation (pursuant to Section 173(2)) of technology resulting in LAER was so much less than the total cost of a modified plant that it did not act as a disincentive.

EPA believes that the examples provided by the commenters support its statement in the proposal that the dual definition impedes legitimate efforts to modernize existing plants. (See, e.g., comments of Crown Zellerbach; Union Oil Corporation.) This is particularly true in areas subject to the construction moratorium, where plants cannot modernize a particular facility, even if emissions at the plant as a whole actually decrease. To deny construction to candidate modernization

projects which would cause no significant increase in air pollution at the plant, and which in some cases would produce a net air quality improvement, may call upon such projects to bear an unacceptably large part of the overall burden for cleaning up a nonattainment area. Accordingly, EPA has concluded that elimination of the dual definition requirement will remove a barrier to modernization of the nation's industrial base.

A related issue raised by some commenters was that deletion of the dual definition would actually result in more economic inefficiency in the nonattainment area as a whole. The argument here rests on two claims. First, installation of technology representing LAER means the new source will have lower emissions and thus need fewer offsets: sources not installing LAER would need more offsetting reductions to avoid the need for a permit. Deletion of the dual definition therefore would mean that more cost-effective reductions would be used up quickly, leaving fewer reductions available over the long term. This would make it more difficult for new sources to find needed offsets and so could actually impede growth over time: and if additional reductions were needed to attain the NAAQS, they could only be obtained by imposing additional controls on existing sources, controls which would require costly retrofits. Second, the proposal was alleged to favor large existing sources over new sources, because many existing sources have significant amounts of available emission reductions that can be used to avoid the need for a permit whereas new sources would always have to undergo nonattainment area NSR. This means that existing sources might use up all the available reductions, and so preclude all new construction.

The concerns raised by these commenters are at this point speculative, particularly in view of the fact that the commenters provided no data to support their claims. In addition, they contradict a central principle of economic efficiency, under which the cheapest and most cost-effective emission reductions should be allowed to be used first, not saved until some hypothetical future need develops while more expensive controls are used first. More importantly, given the structure of

the Act, EPA believes that the choice of whether to take the risks these commenters mention is one properly made by the states, not the federal government. If a state feels that the long-term risks of the plantwide definition outweigh its potential shortterm benefits, then that state may properly retain the dual definition. But this kind of decision is essentially based on economic factors, not air quality concerns, and so is appropriately left to the states. *Cf. Union Electric Co. v. EPA*. 427 U.S. 246 (1976).

### *B. Regulatory Complexity*

Supporters of the proposal endorsed it as a means of simplifying the regulations, thereby reducing some of the confusion in the permit review process and eliminating an inconsistency with the PSD program. Other commenters asserted that the dual definition adds only slightly to the complexity of the regulations and that anyone who carefully reviews the regulations can readily understand the way in which the definition works.

EPA believes that elimination of the dual definition clearly simplifies what any objective observer would agree is a quite complex regulation. First, plants sometimes must get a PSD permit for one pollutant and a nonattainment permit for another pollutant. Using the same definition for PSD and nonattainment purposes simplifies the permit process. Second, by defining "source" in essence as an entire plant. EPA has eliminated the problem of determining what an "installation" is in a given situation.

### *C. Application of Control Technology*

Many commenters agreed that adequate use of the most up-to-date control technology is assured, regardless of the applicability of nonattainment area NSR, because NSPS will continue to apply to many new or modified facilities. Other commenters argued, however, that there is no applicable NSPS for many categories of sources, and that NSPS is often not as stringent as LAER. These commenters also claimed that Congress intended that all new sources must install some

form of advanced pollution control technology, particularly in nonattainment areas where the maximum possible emission reductions must be obtained.

EPA has embarked upon an expanded program of NSPS development. See 40 CFR 60.16. This program will assure that most major emitting source categories will be covered by an NSPS. Accordingly, EPA believes that eventually the NSPS program will ensure that new and modified sources will adequately apply state-of-the-art control technology. To the extent that the controls imposed are not as strict as LAER, the internal offsets needed to "net out" of NSR will make up the difference.

EPA agrees that in some cases an NSPS will be less stringent than LAER. But this comment is not wholly relevant, for while Congress intended that new or modified *sources* apply LAER, it left EPA discretion to define "source." As noted above, EPA believes that a plantwide definition of "source" is consistent with the purposes of the nonattainment provisions of the Act, and so comports with Congressional intent. Consequently, EPA's approach with regard to application of control equipment is consistent with the Act.

#### *D. Assuring Reasonable Further Progress and Attainment*

Many commenters who supported the proposal emphasized that the states will remain subject to the requirement that they demonstrate that each nonattainment area will attain the NAAQS as expeditiously as practicable and will show reasonable further progress toward attainment. These commenters thus agreed with EPA that use of a plantwide definition need not interfere with the fundamental purpose of Part D of the Act (relating to nonattainment areas). Other commenters challenged EPA's analysis, arguing that most RFP analyses and attainment demonstrations are so imprecise that extensive NSR coverage is essential to assuring attainment and RFP. These commenters claimed that this imprecision is exacerbated by the fact that most Part D SIPs are based on deficient emission inventories. Therefore, the reviewing au-

thority cannot say with confidence that any opportunities for emissions reductions can be ignored. They added that this

\* \* \*

[50769-70 omitted]

Pursuant to the provisions of 5 U.S.C. 605(b), I hereby certify that this action will not have a significant economic impact upon a substantial number of small entities. These rules will reduce regulatory burdens since fewer sources will be subject to NSR and the construction moratorium. Since the requirements of the Clean Air Act apply to all sources defined as major, EPA did not have the additional flexibility to alter the applicability of these requirements to any small entities that meet the definition of major source.

Under Executive Order 12291, EPA must judge whether a regulation is "major" and therefore subject to the requirement of a Regulatory Impact Analysis. This regulation is not major because it reduces the coverage of nonattainment area NSR and the construction moratorium and so lessens regulatory burdens.

This action was submitted to the Office of Management and Budget (OMB) for review as required by the Order. Any comments from OMB to EPA and any EPA response are available for public inspection at the Central Docket Section, U.S. Environmental Protection Agency, West Tower, 401 M Street, S.W., Washington, D.C. 20460 (Docket A-81-14)

Pursuant to 5 U.S.C. 553(d)(1), this action is being made immediately effective because it relieves a restriction.

The rules being promulgated today are nationally applicable, and this action is based upon a determination of nationwide scope and effect. Under Section 307(b)(1) of the Clean Air Act, judicial review may only be sought in the United States Circuit Court of Appeals for the District of Columbia Circuit. Petitions for judicial review must be filed on or before December 14, 1981.

(Secs. 110(a)(2)(I), 172(b)(6), 173, 301(a) of the Clean Air Act, as amended, (42 U.S.C. 7410(a)(2)(I), 7502(b)(6), 7503, 7601(a)); Sec. 129(a)(1) of the Clean Air Act Amendments of 1977, Pub. L. No. 95-95, 91 Stat. 685 (August 7, 1977))

Dated: October 3, 1981.

## **PART 51—REQUIREMENTS FOR PREPARATION, ADOPTION, AND SUBMITTAL OF IMPLEMENTATION PLANS**

### **Appendix S [Amended]**

1. Section II, Subsection A of the Emissions Offset Interpretative Ruling, 40 CFR Part 51 Appendix S, as revised 44 FR 3274 (January 16, 1979), 45 FR 31307 (May 13, 1980), 45 FR 52741 (August 7, 1980), and 45 FR 59879 (September 11, 1980) is amended as follows:

a. By changing the words "Building, structure or facility" at the beginning of paragraph 2 to read "Building, structure, facility or installation";

b. By removing paragraph 3 and renumbering the succeeding paragraphs accordingly; and

c. By removing paragraphs 9 and 10 and renumbering the succeeding paragraphs accordingly.

### **§ 51.18 [Amended]**

2. Section 40 CFR 51.18(j)(1) is amended as follows:

a. By changing the words "Building, structure or facility" at the beginning of paragraph (j)(1)(ii) to read "Building, structure, facility or installation";

b. By removing paragraph (j)(1)(iii) and renumbering the succeeding subparagraphs accordingly; and

c. By removing paragraphs (j)(1)(ix) and (x) and renumbering the succeeding subparagraphs accordingly.

## **PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS**

### **§ 52.24 [Amended]**

3. Section 40 CFR 52.24(f) is amended as follows:

a. By changing the words "Building, structure or facility" at the beginning of paragraph (f)(2) and to read "Building, structure, facility or installation";

b. By removing paragraph (f)(3) and renumbering the succeeding subparagraphs accordingly; and

c. By removing paragraphs (f)(9) and (10) and renumbering the succeeding subparagraphs accordingly.

[FR Doc. 87-29706 Filed 10-13-81; 8:45 a.m.]

### **3. Selected EPA Provisions Governing Part D State Plans, Including Definitions Deleted By EPA's 1981 Rulemaking; Adopted August 7, 1980 (45 Fed. Reg. 52676) And Codified At 40 C.F.R. §§ 51.18(j)(1)(i), (ii), (iii), (vi), (ix) (1981):**

#### **§ 51.18 Review of new sources and modifications.<sup>1</sup>**

\* \* \*

(j) State Implementation Plan provisions satisfying sections 172(b)(6) and 173 of the Act shall meet the following conditons:

(1) All such plans shall use the specific definitions. Deviations from the following wording will be approved only if the state specifically demonstrates that the submitted definition is more stringent, or at least as stringent, in all respects as the corresponding definition below:

(i) "Stationary source" means any building, structure, facility, or installation which emits or may emit any air pollutant subject to regulation under the Act.

(ii) "Building, structure, or facility" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e., which have the same two-digit code) as described in the *Standard Industrial Classification Manual*, 1972, as amended by the 1977 Supplement (U.S. Government Printing Office stock numbers 4101-0066 and 003-005-00176-0, respectively).

(iii) "Installation" means an identifiable piece of process equipment.

\* \* \*

(vi)(a) "Major modification" means any physical change in or change in the method of operation of a major stationary source that would result in a significant net emissions increase of any pollutant subject to regulation under the Act.

\* \* \*

(ix) "Reconstruction" will be presumed to have taken place where the fixed capital cost of the new components exceeds 50 percent of the fixed capital cost of a comparable entirely new stationary source. Any final decision as to whether reconstruction has occurred shall be made in accordance with the provisions of 40 CFR 60.15(f)(1)-(3). A reconstructed stationary source will be treated as a new stationary source for purposes of this subsection. In determining lowest achievable emission rate for a reconstructed stationary source, the provisions of 40 CFR 60.15 (f)(4) shall be taken into account in assessing whether a new source performance standard is applicable to such stationary source.

**C. LIST OF CORPORATE PETITIONERS' PARENT COMPANIES, SUBSIDIARIES AND AFFILIATES PURSUANT TO SUPREME RULE 28.1**

The following list is submitted pursuant to Rule 28.1 of the Rules of the Supreme Court of the United States. Listed are the parent companies, non-wholly owned subsidiaries and affiliates of the corporate petitioners upon whose behalf the foregoing Petition is filed. The corporate petitioners are grouped with the lead petitioner with whom they joined in moving to intervene as respondents in the proceedings in the United States Court of Appeals for the District of Columbia Circuit.

**Corporate Petitioners Who Were Intervenor-Respondents Together With The American Iron And Steel Institute.<sup>1</sup>**

**ARMCO INC.**

*Subsidiaries and Affiliates*

**Oregon Metallurgical Corporation**

**JONES & LAUGHLIN STEEL CORPORATION**, a division of

**JONES & LAUGHLIN STEEL, INCORPORATED**

*Parent Company*

**The LTV Corporation**

---

<sup>1</sup> The above list includes only publicly held domestic subsidiaries and affiliates of these corporations. Corporate petitioner United States Steel Corporation does not have any domestic corporate affiliates or subsidiaries voting securities of which are publicly traded. Some of the eight corporate petitioners that intervened together with the American Iron and Steel Institute may have non-publicly held or foreign affiliates and subsidiaries. A list of these companies can be compiled and supplied upon request.
